SPIE

Volume 11587

Proceedings of SPIE 0277-786X, V. 11587

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Electroactive Polymer Actuators and Devices (EAPAD) XXIII, edited by Iain A. Anderson,
Herbert R. Shea, John D. W. Madden, Proc. of SPIE Vol. 11587, 1158701
© 2021 SPIE · CCC code: 0277-786X/21/\$21 · doi: 10.1117/12.2597318

Proc. of SPIE Vol. 11587 1158701-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Electroactive Polymer Actuators and Devices (EAPAD) XXIII*, edited by Iain A. Anderson, Herbert R. Shea, John D. Madden, Proc. of SPIE 11587, Seven-digit Article CID Number (DD/MM/YYYY): (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

DE MULTI-PHYSICS SENSING

- 11587 08 **Novel dielectric elastomer sensors for the measurement of elevated pressure loads [11587-6]**
- 11587 09 **Pneumatic artificial muscles embedded with dielectric elastomer sensor [11587-7]**
- 11587 0A **Jumping into virtual reality with dielectric elastomer sensors [11587-8]**

GEL ACTUATORS

- 11587 0I **Window-opener as an example for environment measurement and combined actuation of smart hydrogels [11587-15]**

THERMAL INFLUENCES

- 11587 0M **Control of twisted-coiled actuators via multi-DOF PID [11587-19]**
- 11587 0N **Supercoiled polymer-actuated pinch valve [11587-20]**
- 11587 0O **A 2D refreshable Braille display based on a stiffness variable polymer and pneumatic actuation [11587-21]**

MULTILAYER DE ACTUATORS

- 11587 0R **Characterization and modeling of an array of dielectric elastomer taxels [11587-24]**
- 11587 0T **Multilayer dielectric elastomer unimorph actuators for self-folding shape-shifting surfaces [11587-26]**
- 11587 0U **Fabrication and characterization of thin film-based multilayered dielectric elastomer stack transducers via submodules [11587-27]**

IONIC EAP I

- 11587 0X **Modeling, analysis and characterization of ionic electroactive polymers based tri-layer micro-actuators [11587-30]**

11587 0Y **Trilayer conducting polymer transduction: device physics, modeling, and simulation [11587-31]**

IONIC EAP II

11587 0Z **Modeling water motion in ionic polymer metal composites [11587-32]**

11587 10 **The role of cations on contactless actuation of perfluorinated ionomer membranes in salt solution [11587-33]**

11587 11 **Hierarchical electroactive polypyrrole-carbon nanotube composite microstructures by high resolution vat polymerization and soft template electropolymerization [11587-34]**

11587 12 **Soft-template electrochemical polymerization for the advancement of electroactive polymer drug delivery systems [11587-35]**

11587 13 **Synthetic Muscle Electroactive Polymer (EAP) pressure sensing and controlled shape-morphing for robotic grippers [11587-36]**

SILICONE AND ELECTRONS

11587 14 **High-permittivity silicone dielectric elastomers compatible with ionic liquid-grafted chloropropyl-silicone oil [11587-37]**

11587 15 **Super-stretchable silicone elastomer applied in low voltage actuators [11587-38]**

11587 16 **Frequency dependent behavior of silicone slide-ring elastomers [11587-39]**

11587 17 **Novel measurement setup for dielectric elastomer sensors enabling the detection of multiple load scenarios with integrated adjustment for scalable sensor sizes [11587-40]**

11587 18 **Effect of dielectrophoretic structuring on dielectric and piezoelectric behaviors of ZnO/PDMS microcomposite [11587-41]**

EXTENDING DIELECTRIC LIFETIME AND SELF-HEALING, COATING, AND ELECTRODING

11587 1B **Effect of electrode composition and patterning method on the lifetime of silicone-based dielectric elastomer actuators (DEA) under different environmental conditions [11587-44]**

11587 1C **Beware of your electrodes! How electrode materials and application processes impact the lifetime of slide-ring-material-based DEAs [11587-45]**

IONIC EAP III

- 11587 1E **Memory effect and dynamics in PEDOT:PSS-based actuators under DC voltage** [11587-47]
- 11587 1F **Dense carbon nanotube array-ionic electroactive polymer composite actuators** [11587-48]

DELECTRIC ELASTOMERS FOR SOFT ROBOTS, CELLS, AND SPEAKERS

- 11587 1H **Modeling and parameter identification of rolled dielectric elastomer actuators for soft robots** [11587-50]
- 11587 1J **Cost-efficient and high-precision HV amplifier for driving DE loudspeakers** [11587-52]
- 11587 1K **A multi-domain dynamical model for cone-shaped dielectric elastomer loudspeakers** [11587-53]

TENSEGRITY, ENERGY HARVESTING

- 11587 1L **Active tensegrity structures based on dielectric elastomer actuators** [11587-54]

DE FABRICATION

- 11587 1O **Fabrication of zipping electrostatic actuators incorporating inkjet-printed layers** [11587-57]
- 11587 1P **Electrical and mechanical characterization of medical grade silicones as dielectric layers in aerosol jet printed dielectric elastomers** [11587-58]
- 11587 1Q **Investigation of a deposition method for the application of electrode layers for dielectric elastomer transducers** [11587-59]
- 11587 1R **Automated and scalable sheet-to-sheet manufacturing process for fabrication of dielectric elastomer laminates based on thin films** [11587-60]
- 11587 1S **Experimental characterization of a multilayer silicone-based electroactive patch for gripper applications** [11587-61]

IMPROVING DIELECTRIC ELASTOMER PERFORMANCE

- 11587 1T **Challenge of creating high performance dielectric elastomers** [11587-62]
- 11587 1V **On the electrode-elastomer patterns in dielectric elastomer actuator motion** [11587-64]

POSTER SESSION

- 11587 1W **High-performance moisture sensors applying dielectric elastomer** [11587-65]
- 11587 1X **Electromechanical response of piezoelectric thin films subjected to large strain** [11587-66]
- 11587 1Y **Self-clearable bilayer electrode for dielectric elastomer actuators** [11587-67]
- 11587 1Z **Fatigue life prediction of electroactive polymer strain sensor** [11587-68]
- 11587 20 **A method to characterize the mechanical impedance of thin stacked DEAs by suspension and electrical excitation** [11587-69]
- 11587 22 **Modal analysis of circular buckling dielectric elastomer transducers** [11587-71]
- 11587 23 **A proprioceptive DE sensor skin for a fish-like continuum robot** [11587-72]
- 11587 25 **A mesoscopic level multi-scale approach to generate a complex polymer morphology** [11587-74]
