Proceedings of SPIE 0277-786X, V. 12449

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optical Architectures for Displays and Sensing in Augmented, Virtual, and Mixed Reality (AR, VR, MR) IV,
edited by Bernard C. Kress, Christophe Peroz, Proc. of SPIE Vol. 12449, 1244901
© 2023 SPIE · 0277-786X · doi: 10.1117/12.2678733

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Optical Architectures for Displays and Sensing in Augmented, Virtual, and Mixed Reality (AR, VR, MR) IV*, edited by Bernard C. Kress, Christophe Peroz, Proc. of SPIE 12449, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

NANO-MANUFACTURING I

12449 02 **Optical-grade polymers with adjusted refractive index for waveguide combiners** [12449-7]

12449 03 **Manufacture of low refractive index plastic waveguide with wide angle of view** [12449-15]

12449 04 **Scalable patterning modules for diffractive optics on 300mm substrates** [12449-16]

12449 05 **Ultra-high refractive index materials for patterning diffractive optical elements with nanoimprint lithography** [12449-20]

12449 06 **Enabling the Metaverse through mass manufacturing of industry-standard optical waveguide combiners** [12449-118]

12449 07 **Scanning overlapped phase interference lithography system for manufacturing optical waveguide combiner** [12449-138]

NANO-MANUFACTURING II

12449 08 **Phosio: high-index inorganic coatings for engineered optics** [12449-21]

12449 09 **UV stable high-refractive index nanocomposites for extended reality (XR)** [12449-22]

12449 0A **SCIL nanoimprint solutions, turning your surfaces into functions: direct patterning of nano-photonics** [12449-25]

DISPLAY ENGINES

12449 0F **Hybrid integrated RGB light engine for AR in silicon nitride PIC technology** [12449-18]

12449 0G **Evaluating an AR display employing laser beam scanner with waveguide combiner against the IEC 60825-1:2014 standard** [12449-23]

12449 0H **Rapid development and fabrication of AR/MR displays** [12449-24]

DISPLAY ENGINES AND METROLOGY

12449 0I **LED based projection displays are the enabler for the 1st generation of consumer AR smart glasses** [12449-27]

12449 0J **Laser-based projection displays for all-day-use consumer AR glasses** [12449-28]

12449 0K **Fast and efficient way of eye box measurement using wide field-of-view lens for augmented reality waveguides** [12449-2]

12449 0M **Simplifying the manufacture and design of optical systems for AR glasses with DynamicPixelTuning® microLED technology** [12449-106]

OPTICAL DESIGN & DISPLAY ARCHITECTURE

12449 0N **A novel birdbath eyepiece for light field AR glasses** [12449-5]

12449 0O **High resolution reflective polarizer lens for catadioptric VR optics with accommodating eye box design** [12449-9]

12449 0Q **Switchable flat optical elements with patterned cholesteric liquid crystal for augmented reality displays** [12449-29]

12449 0R **Multilayer photonic-integrated circuit design for dense random waveguide distribution addressing, application to near-eye display** [12449-137]

12449 0S **Convergence of mathematical and physical optical designs for the development of random photonic integrated circuits for an unconventional AR display concept** [12449-142]

HUMAN PERCEPTION AND USE CASES

12449 0T **Binocular see-through configuration and eye movement attenuate visual rivalry in peripheral wearable displays** [12449-11]

12449 0U **Ghost analysis of a polarized catadioptric system for virtual reality** [12449-12]

12449 0V **A novel augmented reality system to improve pediatric cardiopulmonary resuscitation performance: a device that could save children's lives** [12449-4]

12449 0W **Real-time animation display based on optical illusion by overlaid luminance changes** [12449-8]

WAVEGUIDES

12449 0X **Optimization and tolerance for an exit pupil expander with 2D grating as out-coupler** [12449-1]

12449 0Y **Efficient all-dielectric metasurface in-coupler for waveguide-based near-eye display** [12449-3]

12449 0Z **Design method and simulation of large field-of-view diffractive waveguide displays** [12449-10]

12449 10 **Holography demonstrations for fabricating Bayfol ® HX vHOE's with applications in see-through displays** [12449-19]

SENSORS

12449 11 **"Better than DOE optics" solution in ToF sensors for wearable XR device** [12449-26]

12449 12 **Full-color binocular retinal scan AR display with pupil tracking system** [12449-31]

12449 13 **Low-power, low-latency perception for XR** [12449-32]

12449 14 **New methods for spectral imaging in shortwave infrared for augmented reality applications** [12449-13]

12449 17 **Fringe projection-based single-shot 3D eye tracking using deep learning and computer graphics** [12449-140]

POSTER SESSION

12449 1I **An optical metrology system for fully automated waveguide image quality measurements** [12449-101]

12449 1J **Development of virtual reality walking collision detection test on head-mounted display** [12449-103]

12449 1K **Automated generation of high-accuracy CAD models for metaform design, fabrication, and testing** [12449-107]

12449 1L **Analysis of error rate in hierarchical menu selection in immersive augmented reality** [12449-109]

12449 1M **Validating distortion measurements of wide-field-of-view near-eye displays** [12449-110]

12449 1N **Development of augmented reality technology for surgical resection accuracy via improved visualization** [12449-111]

12449 1O **Evaluation of pulsed laser sources for a solid-state diffractive image steering and foveation by Texas Instruments digital micromirror device** [12449-112]

12449 1Q **2D curved holographic waveguide combiner for augmented reality with pupil expansion** [12449-114]

12449 1T **Field-of-view expansion via diffractive image steering and prism array** [12449-117]

12449 1U **High strength laser cutting of high refractive index wafers for augmented reality** [12449-119]

12449 1V **Full color incoherent holographic streaming system** [12449-120]

12449 1W **Better virtual objects placement in real world through photogrammetry for object recognition and spatial anchoring** [12449-121]

12449 20 **Fill factor analysis of holographic micromirror array for 3D augmented-reality system** [12449-128]

12449 21 **Miniaturization and geometric optimization of SteamVR active optical trackers** [12449-129]

12449 23 **High-index and high-transparent glass for AR/MR devices** [12449-131]

12449 25 **Impact of interpupillary distance mismatch on visual aftereffects of virtual reality gameplay** [12449-134]

12449 26 **High precision grating of waveguide combiner with scanning overlapped phase interference lithography** [12449-141]

Conference Chairs

Bernard C. Kress, Google (United States)
Christophe Peroz, Google (United States)

Conference Program Committee

Martin S. Banks, University of California, Berkeley (United States)
Pablo Benítez, Universidat Politécnica de Madrid (Spain)
Julie L. Bentley, University of Rochester (United States)
Michael P. Browne, SA Photonics, Inc. (United States)
Pierre H. Chavel, Institut d'Optique Graduate School (France)
Kevin R. Curtis, Magic Leap, Inc. (United States)
Weichuan Gao, Facebook Technologies, LLC (United States)
Andreas G. Georgiou, Microsoft Research Cambridge (United Kingdom)
Hong Hua, College of Optical Sciences, The University of Arizona (United States)
Yi-Hsin Lin, National Yang Ming Chiao Tung University (Taiwan)
Fernando Mendoza-Santoyo, Centro de Investigaciones en Óptica, A.C. (Mexico)
Hiroshi Mukawa, Sony Corporation (Japan)
Bharathwaj Appan Narasimhan, Magic Leap, Inc. (United States)
Maria Pace, Google (United States)
Yifan (Evan) Peng, Stanford University (United States)
Jannick P. Rolland, The Institute of Optics (United States)
Zhujun Shi, Apple Inc. (United States)
Guanjun Tan, Apple Inc. (United States)
Prachi Thureja, Caltech (United States)
Guohua Wei, Meta (United States)
Gordon Wetzstein, Stanford University (United States)
Shin-Tson Wu, CREOL, The College of Optics and Photonics, University of Central Florida (United States)
