Proceedings of SPIE, 0277-786X, v. 7813

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/10/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

The logo for SPIE Digital Library features the word "SPIE" in a bold, sans-serif font above the words "Digital Library" in a similar font. To the right of the text is a stylized graphic consisting of three vertical bars of varying heights, with a red arc above them.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 REMOTE SENSING SYSTEM PRODUCTS AND ALGORITHMS

- 7813 04 **An overview of the GOES-R ground segment architecture** [7813-03]
D. Hansen, Harris Corp. (United States); J. Bristow, NASA Goddard Space Flight Ctr. (United States); S. Kalluri, NOAA/NESDIS (United States); A. Weiner, G. Dittberner, Harris Corp. (United States)
- 7813 05 **The product generation architecture for the GOES-R ground system** [7813-04]
G. Dittberner, Harris Corp. (United States); S. Kalluri, NOAA/NESDIS (United States); A. Weiner, M. Blanton, A. Tarpley, Harris Corp. (United States)
- 7813 06 **GOES-R algorithms: a common science and engineering design and development approach for delivering next generation environmental data products** [7813-05]
J. L. Baldwin, B. H. Braswell, D. B. Hogan, E. Kennelly, X. Papadakis, M. Sze, A. Werbos, T. S. Zaccheo, Atmospheric and Environmental Research, Inc. (United States)

SESSION 2 SYSTEM PERFORMANCE MODELING

- 7813 07 **Predicting top-of-atmosphere radiance for arbitrary viewing geometries from the visible to thermal infrared** [7813-06]
S. A. Cota, L. S. Kalman, The Aerospace Corp. (United States)
- 7813 08 **Predicting top-of-atmosphere radiance for arbitrary viewing geometries from the visible to thermal infrared: generalization to arbitrary average scene temperatures** [7813-07]
C. J. Florio, S. A. Cota, S. K. Gaffney, The Aerospace Corp. (United States)
- 7813 09 **Synthetic scene building for testing thermal signature tracking algorithms** [7813-08]
D. B. Rhodes, Z. Ninkov, Rochester Institute of Technology (United States); J. L. Pipher, C. W. McMurtry, Univ. of Rochester (United States); J. D. Newman, P. P. K. Lee, G. J. Gosian, ITT Geospatial Systems (United States); M. D. Presnar, Rochester Institute of Technology (United States) and Air Force Institute of Technology (United States)

SESSION 3 FUTURE SYSTEMS

- 7813 0A **Development of the second generation Hyperspectral Airborne Terrestrial Imager (HATI): HATI - 2500** [7813-26]
S. Sandor-Leahy, S. Thordarson, B. Baldauf, M. Figueroa, M. Helmlinger, H. Miller, T. Reynolds, J. Shepanski, Northrop Grumman Aerospace Systems (United States)

- 7813 0B **Future VIIRS enhancements for the integrated polar-orbiting environmental satellite system (Invited Paper)** [7813-09]
J. J. Puschell, J. Silny, L. Cook, E. Kim, Raytheon Space & Airborne Systems (United States)
- 7813 0C **Systems approach to developing a climate data record from satellite observations (Invited Paper)** [7813-10]
S. E. Broberg, T. S. Pagano, H. H. Aumann, D. A. Elliott, F. O'Callaghan, Jet Propulsion Lab. (United States)
- 7813 0D **The Hyperspectral Imager for the Coastal Ocean (HICO): fast build for the ISS** [7813-24]
R. L. Lucke, M. Corson, U.S. Naval Research Lab. (United States); N. R. McGlothlin, S. D. Butcher, D. L. Wood, Praxis, Inc. (United States)
- 7813 0E **The Specular Array Radiometric Calibration (SPARC) method: a new approach for absolute vicarious calibration in the solar reflective spectrum** [7813-12]
S. J. Schiller, J. Silny, Raytheon Space & Airborne Systems (United States)
- 7813 0F **Imaging spectrometer trade studies: a detailed comparison of the Offner-Chrisp and reflective triplet optical design forms** [7813-13]
L. G. Cook, J. F. Silny, Raytheon Space & Airborne Systems (United States)
- 7813 0G **Imagery spatial performance throughput correction methodology** [7813-14]
D. T. Fang, J. Puschell, Raytheon Co. (United States)
- 7813 0H **FMCW lidar for multiple-target sounding** [7813-15]
O. Batet, F. Dios, A. Comeron, Univ. Politècnica de Catalunya (Spain)

POSTER SESSION

- 7813 0I **Design and development of the Laser Retroreflector Array (LRA) for SARAL** [7813-16]
V. Costes, K. Gasc, P. Sengenès, C. Salcedo, Ctr. National d'Études Spatiales (France); S. Imperiali, B. Passier, C. Du Jeu, SESO (France); L. Escarrat, Sophia Conseil (France)
- 7813 0J **Experimental approach for geometrical calibration of small UAV sensors** [7813-17]
A. Sergeyev, E. Levin, Michigan Technological Univ. (United States)
- 7813 0K **Opto-mechanical design of airborne remote sensing instrument** [7813-18]
W.-C. Lin, C.-F. Ho, H.-L. Tsay, M.-Y. Hsu, P.-H. Huang, C.-W. Hsu, T.-M. Huang, Instrument Technology Research Ctr. (Taiwan)
- 7813 0L **A method of autofocus for remote sensing camera** [7813-19]
X. Meng, H. Feng, Z. Xu, Q. Li, Y. Chen, Zhejiang Univ. (China)
- 7813 0M **The Cassegrain Telescope primary mirror isostatic mount design for thermal stress** [7813-20]
M. Y. Hsu, W. C. Lin, M. Y. Yang, C. Y. Chan, Y. C. Lin, S. T. Chang, C. F. Ho, T. M. Huang, Instrument Technology Research Ctr. (Taiwan)
- 7813 0O **Intelligent fiber sensing system for the oil field area** [7813-22]
W. Sun, DA Qing Oilfield Corp., Ltd. (China); L. Ma, Atphotronics Inc. (United States)

7813 0P **Novel approach for simultaneous measurement of strain and temperature using a single tapered fiber Bragg grating** [7813-23]
M. Kondiparthi, Indian Institute of Science (India)

7813 0Q **Simultaneous measurement of strain and temperature with a pair of matched fiber Bragg gratings** [7813-25]
M. Kondiparthi, S. B.N, Indian Institute of Science (India)

Conference Committee

Program Track Chair

Allen H.-L. Huang, University of Wisconsin, Madison (United States)

Conference Chairs

Philip E. Ardanuy, Raytheon Intelligence & Information Systems (United States)

Jeffery J. Puschell, Raytheon Space & Airborne Systems (United States)

Conference Cochairs

Hal J. Bloom, Earth Resources Technology, Inc. (United States)

Allen H.-L. Huang, University of Wisconsin, Madison (United States)

Program Committee

Stephen A. Cota, The Aerospace Corporation (United States)

Gerald J. Dittberner, Harris Corporation (United States)

R. Patrick Earhart, Ball Aerospace & Technologies Corporation (United States)

William B. Gail, Microsoft Corporation (United States)

Om P. Gupta, Iridium Satellite LLC (United States)

Wei Min Hao, USDA Forest Service (United States)

Gerard Jansson, Intelsat Global Service Corporation (United States)

Stephen A. Mango, NOAA/NESDIS (United States)

Carl F. Schueler, Orbital Sciences Corporation (United States)

Session Chairs

- 1 Remote Sensing System Products and Algorithms
Jeffery J. Puschell, Raytheon Space & Airborne Systems (United States)
- 2 System Performance Modeling
Gerald J. Dittberner, Harris Corporation (United States)
- 3 Future Systems
Philip E. Ardanuy, Raytheon Intelligence & Information Systems (United States)

Introduction

This volume contains the proceedings for the SPIE conference on Remote Sensing System Engineering III. This conference was held in San Diego, California, 2 August 2010, as part of the Optical Engineering + Applications section of SPIE Optics + Photonics.

As in the previous two conferences in this series, the goals of this conference were to discuss existing and emerging design approaches, engineering methods, tools, and future trends for engineering of remote sensing systems. This topic included:

- (1) system architecture and design
- (2) requirements, performance metrics and measures of success
- (3) modeling and simulation tools and methods
- (4) design and integration of distributed architectures
- (5) use of commercial assets in future remote sensing systems
- (6) end user, effective data/information/system utilization, and optimum return on investment

To achieve these goals, papers were solicited in, but not limited to, the following areas:

- system architecture and design for current and future experimental, research, and operational Earth and space remote sensing programs and experiments
- system engineering metrics and measures of success leading to optimal system design methods and approaches for system requirements identification, definition and allocation for operational programs and experiments
- end-to-end system modeling and simulation methods and tools system engineering approaches for optimizing transition of research systems to operational use
- distributed remote sensing system architectures
- integrated system of systems: engineering approaches and methods
- remote sensors as payloads onboard multifunctional space platforms such as the International Space Station and space satellite communication systems like Intelsat and Iridium NEXT.

A total of 26 papers were presented in five sessions. A highlight of this conference was an interactive workshop on remote sensing systems engineering lessons learned led by program committee member Carl Schueler that provided an opportunity for young engineers and scientists to meet and talk with leading experts in remote sensing system engineering and science.

We enjoyed the participation of a diverse group of international researchers from government, academia, and industry. The range of topics in this conference

continues to grow and included new and future space-based remote sensing systems like HICO, the hyperspectral imager currently onboard the International Space Station, GOES-R, the future US geosynchronous environmental satellite system and VIIRS, the future US polar-orbiting environmental imager along with system approaches for developing climate data records, a new method for absolute vicarious radiometric calibration in the solar reflective spectral region and imager spectrometer trade studies to guide future instrument design.

We thank all of the participants who made this conference successful, especially the cochairs, program committee, and authors.

Jeffery J. Puschell
Philip E. Ardanuy
