Proceedings of SPIE, 0277-786X, v. 7458

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

v	<i>Conference Committee</i>
vii	<i>Introduction</i>

SESSION 1 FUTURE SPACE-BASED REMOTE SENSING SYSTEMS

- 7458 02 **Next generation Geostationary Operational Environmental Satellite: GOES-R, the United States' advanced weather sentinel (Invited Paper)** [7458-01]
H. J. Bloom, NASA Goddard Space Flight Ctr. (United States)
- 7458 04 **SeaWiFS-2: an ocean color data continuity mission to address climate change** [7458-03]
M. G. Hammann, GeoEye, Inc. (United States); J. J. Puschell, Raytheon Space and Airborne Systems (United States)
- 7458 05 **A novel digital image sensor with row wise gain compensation for Hyper Spectral Imager (HySI) application** [7458-23]
S. Lin, CMOS Sensor, Inc. (United States); C.-P. Lin, CMOS Sensor, Inc. (Taiwan); W.-L. Wang, CMOS Sensor, Inc. (United States); F.-K. Hsiao, CMOS Sensor, Inc. (Taiwan); R. Sikora, CMOS Sensor, Inc. (United States)
- 7458 06 **Development of the Compact InfraRed Camera (CIRC) for wildfire detection** [7458-05]
H. Katayama, M. Naitoh, M. Suganuma, M. Harada, Y. Okamura, Y. Tange, K. Nakau, Japan Aerospace Exploration Agency (Japan)
- 7458 07 **Satellite-instrument system engineering best practices and lessons** [7458-06]
C. F. Schueler, Orbital Sciences Corp. (United States)

SESSION 2 FUTURE PROCESSING AND DECISION SUPPORT ARCHITECTURES

- 7458 0A **Fusion of airborne radar and FLIR sensors for runway incursion detection** [7458-09]
J. H. White, RTI International (United States); J. G. Haidt, C. L. Britt, Consultant (United States); C. Archer, FLIR Systems (United States); R. T. Neece, NASA Langley Research Ctr. (United States)

SESSION 3 REMOTE SENSING OF FIRE: SCIENCE AND APPLICATIONS

- 7458 0C **Production of proxy datasets in support of GOES-R algorithm development** [7458-11]
D. Hillger, NOAA/NESDIS/STAR (United States); R. Brummer, L. Grasso, M. Sengupta, R. DeMaria, Colorado State Univ. (United States); M. DeMaria, NOAA/NESDIS/STAR (United States)

SESSION 4 ADVANCED TECHNOLOGY

7458 0D **The Hyperspectral Airborne Tactical Instrument (HATI): a low-cost compact airborne hyperspectral imager** [7458-12]
S. Sandor-Leahy, S. Thordarson, B. Baldauf, M. Figueroa, M. Helmlinger, H. Miller, T. Reynolds, J. Shepanski, Northrop Grumman Aerospace Systems (United States)

7458 0E **First space qualified digital image sensor enters moon orbit** [7458-13]
W.-L. Wang, S. Lin, CMOS Sensor, Inc. (United States); C.-P. Lin, CMOS Sensor, Inc. (Taiwan); R. Sikora, CMOS Sensor, Inc. (United States)

SESSION 5 MODELING AND SIMULATION METHODS

7458 0G **EVEREST: an end-to-end simulation for assessing the performance of weather data products produced by environmental satellite systems** [7458-15]
M. Shoucri, B. Hauss, Northrop Grumman Aerospace Systems (United States)

7458 0H **The use of the general image quality equation in the design and evaluation of imaging systems** [7458-16]
S. A. Cota, C. J. Florio, D. J. Duvall, M. A. Leon, The Aerospace Corp. (United States)

7458 0K **Macroscopical scatter and reflection behavior of convex bodies in free flight** [7458-20]
C. Hahlweg, H. Rothe, Helmut Schmidt Univ. (Germany)

POSTER SESSION

7458 0L **The theory of fiber grating array OFDR-FS** [7458-21]
F. Meng, Z. Li, B. Yang, Hebei Univ. of Technology (China); S. Dong, Z. Guo, AT Photonics, Inc. (United States)

Jeffery J. Puschell, Raytheon Space & Airborne Systems (United States)

Cochairs

Hal J. Bloom, National Oceanic and Atmospheric Administration, GOES-R Program (United States)

Allen H.-L. Huang, University of Wisconsin, Madison (United States)

Program Track Chair

Allen H.-L. Huang, University of Wisconsin, Madison (United States)

Program Committee

Stephen A. Cota, The Aerospace Corporation (United States)

William B. Gail, Microsoft Corporation (United States)

Wei Min Hao, U.S.D.A. Forest Service (United States)

Gerard Jansson, Intelsat Global Service Corporation (United States)

Carl Anthony Nardell, MIT Lincoln Laboratory (United States)

Lars-Peter Riishojgaard, Joint Center for Satellite Data Assimilation (United States)

Carl F. Schueler, Orbital Sciences Corporation (United States)

Donald L. Thoma, Iridium Satellite LLC (United States)

Session Chairs

1 Future Space-based Remote Sensing Systems
Jeffery J. Puschell, Raytheon Space & Airborne Systems (United States)

2 Future Processing and Decision Support Architectures
Philip E. Ardanuy, Raytheon Intelligence & Information Systems (United States)

3 Remote Sensing of Fire: Science and Applications
Philip E. Ardanuy, Raytheon Intelligence & Information Systems (United States)

- 4 Advanced Technology
 Philip E. Ardanuy, Raytheon Intelligence & Information Systems (United States)
- 5 Modeling and Simulation Methods
 Stephen A. Cota, The Aerospace Corporation (United States)

Introduction

This volume contains the proceedings for the SPIE conference on Remote Sensing System Engineering II. This conference was held in San Diego, California during 2009, August 4–5, as part of the Optical Engineering + Applications section of SPIE Optics + Photonics.

The goals of this conference were to discuss existing and emerging design approaches, engineering methods, tools, and future trends for engineering of remote sensing systems. This topic included: (1) system architecture and design, (2) requirements, performance metrics and measures of success, (3) modeling and simulation tools and methods, (4) design and integration of distributed architectures, (5) use of commercial assets in future remote sensing systems, and (6) the end user, effective data/information/system utilization, and optimum return on investment.

To achieve these goals, papers were solicited in, but not limited to, the following areas:

- system architecture and design for current and future experimental, research, and operational Earth and space remote sensing programs and experiments
- system engineering metrics and measures of success leading to optimal system design
- methods and approaches for system requirements identification, definition and allocation for operational programs and experiments
- end-to-end system modeling and simulation methods and tools
- system engineering approaches for optimizing transition of research systems to operational use
- distributed remote sensing system architectures
- evolution of systems to networks
- integrated system of systems: engineering approaches and methods
- remote sensors as secondary payloads onboard satellite communication systems such as Intelsat and Iridium NEXT
- use of commercial visualization software such as Google Earth and Microsoft Virtual Earth in remote sensing systems.

A total of 24 papers were presented in six sessions, including a joint session with the Satellite Data Compression, Communication, and Processing V conference. We enjoyed the participation of a diverse group of international researchers from government, academia and industry. The range of topics was remarkable and included future space-based remote sensing systems like GOES-R, SeaWiFS-2 and sensors onboard commercial assets such as Iridium NEXT, future processing and decision support architectures such as using FPGAs and GPUs in real-time

processing of data from remote sensing systems, remote sensing of fire, advanced technology such as the first space-qualified digital imager, system modeling and simulation methods including the EVEREST simulation for end-to-end system engineering of environmental remote sensing systems and the PICASSO project for implementing use of a general image quality equation in design and evaluation of imaging systems.

We thank all of the participants who made this conference successful, especially the cochairs, program committee, and authors.

Philip E. Ardanuy
Jeffery J. Puschell
